

# Content Triggers

**Content Triggers** are a premium feature that monitors the audio of your streams in real time. Zeus will listen for trigger words or phrases and assign them a score. Once a stream accumulates 100 trigger points, an alert is sent via an API call so you can take appropriate action based on your community guidelines.

## Adding/Configuring a Content Trigger

1. **Navigate to Content Triggers**
    - In the left-hand menu, click **Content Triggers**.
  2. **Add a New Trigger**
    - In the upper-right corner, click **Actions > Add Trigger**.
  3. **Configure the Trigger**
    - **Select Cluster:** Choose the cluster where you want the content trigger to apply.
    - **Trigger Word/Phrase:** Enter the word or phrase you want Zeus to monitor.
    - **Trigger Score:** Enter the score that should be assigned each time the trigger word/phrase is detected.
  4. **Save Your Trigger**
    - Confirm your settings to add the trigger.
- 

## How to Enable Content Triggers for a Stream

1. **Access Streams**
    - From the left-hand menu, click **Streams**.
  2. **Find Your Stream**
    - Locate the stream you wish to enable content triggers for. You can scroll through the list or use the search box in the upper-right corner to filter the list.
  3. **View Stream Metrics**
    - On the right-hand side of your chosen stream, click **Actions > View Stream Metrics**.
  4. **Enable Content Monitoring**
    - On the stream summary page, in the upper-right corner, click **Content Monitoring**. This action will enable content trigger monitoring for that stream.
-

Your Content Triggers are now set up and active. Zeus will start monitoring the stream's audio, and once the cumulative score reaches 100 points, you'll receive an alert via the configured API. Enjoy the enhanced control over your streaming content!
