

How to watch your stream

1. Access the Streams Overview

- From the **left-hand menu**, select **Streams**.
- This will take you to the streams overview page.

2. Locate Your Stream

- Scroll down until you find your stream.
- Or, use the **search box** in the upper-right corner of the table to filter and locate your stream.

3. View Stream Metrics

- On the **right-hand side** of your stream row, click **Actions > View Stream Metrics**.
- This opens the overview page for your specific stream.

4. Get Connection Details

- On the stream overview page, in the **upper-right corner**, click **Actions > Connection Details**.
- A details page will appear, providing you with the following information:
 - **RTMP Server** – The server endpoint for streaming.
 - **RTMP Key** – The unique key associated with your stream.
 - **RAW HLS Endpoint** – A direct HLS feed from the RTMP server without transcoding (for internal pre-processing only).
 - **Transcoded HLS Endpoint** – A feed that has been transcoded for adaptive bitrate (ABR) and multi-bitrate delivery; ideal for passing to CDNs.
 - **HTML5 Web Player** – Preconfigured HTML and JavaScript markup to embed the live stream directly onto any website.

5. Watch Your Stream

- Use the **Transcoded HLS Endpoint** or embed the **HTML5 Web Player** code on your website to watch the live stream.
- **Note:** Avoid sharing the **RAW HLS Endpoint** publicly as it's intended only for additional processing.

With these steps, you can easily access and monitor your live stream. Enjoy watching your stream in action!
